

LAMINATE FLOORING

MAINTENANCE & CARE

- Sweep or vacuum regularly to remove loose dirt.
- A vacuum with a hardwood floor attachment or one in which the beater bar can be turned off should be used to avoid scratching the floor.
- Laminate flooring must not be exposed to excessive moisture or dryness. Maintain humidity levels and do not oversaturate when cleaning.
- Use the proper laminate floor cleaner, spray lightly on a dust mop and mop back and forth lengthwise along floorboards. We recommend Bona Laminate Floor Cleaner, available at FLOOR360.

LOVE YOUR NEW LAMINATE FLOOR!

Laminate flooring is naturally durable and stain resistant. Laminate has unique visuals and variation in grain and color, which are integral components of its beauty. If you follow these simple care instructions, you will maintain the beauty of your floor for many years to come.

PREVENTATIVE MEASURES

- Place non-staining mats or area rugs at all exterior entrances to prevent dirt and soil from being tracked onto your floor. Be certain to clean those mats often so they keep the outside from coming in.
- Protect flooring by installing felt runners under furniture or chair legs to avoid scratches when they are moved. When moving furniture, lift to avoid scratching the floor.
- Use a damp white cloth to blot up spills promptly.
- Maintain a normal indoor humidity level of 35%-45%.

CLEANING LAMINATE

- For routine cleaning, see the Maintenance and Care section at the top of this care sheet.
- Do not oversaturate when cleaning.
- Do not wet mop the floor with soap, water, oil-based soap, detergent or any other liquid cleaning solution. This may cause swelling, warping, delamination and will void your warranty on the floor.
- Do not use steel wool, abrasive cleaners, ammonia or chlorine based cleaners. Do not use any type of buffing or polishing machine on your laminate flooring.
- For tough stains or spills please see stain solver information on your flooring manufacturer's website or contact FLOOR360 for further assistance.

DID YOU KNOW?

Humidity levels in the home should be maintained as consistently as possible (between 35% and 45%) by using a humidifier or dehumidifier as needed.

35%
- 45%
